

VUB Course Build Tech Stack Diagram

Plain-English Summary

The VUB courses are built like lightweight websites. The website delivers the lessons, handouts, instructor guides, and assessment links. Google Forms and Sheets handle centralized assessment collection when reporting across multiple sites is needed.

Layer View

Layer	What It Does	Tools Or Files
Course delivery	Gives students and instructors one place to launch lessons and resources	<code>index.html</code> , course pages
Presentation	Runs slide-style lessons in the browser	HTML, CSS, JavaScript
Learning materials	Provides printed and digital supports	Handouts, syllabi, teacher guides
Interaction	Handles slide navigation, progress, quizzes, and buttons	JavaScript, browser localStorage
Assessment collection	Captures student answers centrally	Google Forms
Data storage	Stores submitted responses	Google Sheets
Report generation	Shows individual or group results	Browser PDF reports, Sheets summaries, dashboards
Build and testing	Packages and checks the course	Node/npm, Playwright, Python scripts
Delivery backup	Lets the course run even when internet is weak	Flash drive package, local HTML files

What Each Tool Is For

Tool	Purpose	Why We Used It
HTML	Page structure	Easy to open in any browser
CSS	Visual design and print formatting	Keeps the course readable and branded
JavaScript	Interactivity	Handles slides, scoring, reports, and progress
Google Forms	Student assessment submission	Familiar, centralized, easy to share
Google Sheets	Response database	Good for filtering, comparing, and exporting
Google Apps Script	Form setup automation	Avoids manually rebuilding identical tests
Netlify	Optional web hosting	Simple static website deployment
Node/npm	Development utilities	Runs build, package, and test commands
Playwright	Browser testing	Checks that links and browser behavior work
Browser print to PDF	Individual reports	Avoids paid reporting software

How To Explain It In The Meeting

"The course is not one single app. It is a small website made from standard web files. The website delivers the lessons and resources. Google Forms and Sheets are used when we need centralized assessment data. For individual student feedback, we can also generate print-ready reports directly in the browser."

Best Model For Statewide Use

For statewide reporting, use this stack:

Course Website

|

v

Google Form Pre-Test and Post-Test

|

v

Google Sheets Response Data

|

v

Summary Tab / Pivot Table / Dashboard

|

v

Program Report By Location, Cohort, Category, Or Date
